Field Offices of the Department of Commerce.—Price \$1

## PREFACE

This report is the sixth and last publication in Volume III, Governmental Finances, of the 1957 Census of Governments. Other final reports from the census are listed on the inside of the front cover.

The 1957 Census of Governments has been conducted in accordance with the Act of Congress, approved September 7, 1950, "to provide for the conduct of a periodic census of governments" (Title 13, Section 161, United States Code).

Plans and specifications for this census were developed by the Governments Division of the Bureau of the Census, in consultation with other parts of the Bureau, other Federal Government agencies, and the standing Census Advisory Committee on State and Local Government Statistics.

Responsibility for the present report has rested mainly with the Surveys Branch of the Governments Division, which was headed during most of the census period by Joseph F. Arbena. Jacob M. Jaffe exercised a major role in the design of questionnaires, and prepared explicit reporting and examination instructions based on study of the financial characteristics of local governments in various States.

Mail canvass activities were supervised by Dorothy A. Gottschall, and were coordinated with related operations by Daniel J. McGillicuddy. Field enumeration work was performed partly by staff of the Financial Compilation and Analysis Branch of the Governments Division, headed by Lynden Mannen, and partly by the Field Division of the Bureau, under the direction of its Chief, Robert B. Voight.

Examination of incoming local government reports was supervised by Richard J. Neach. Sherman Landau was in charge of technical correspondence and the handling of complex reporting problems, being aided particularly by Frank H. Perry and Robert Brown, Jr. Tabulation of data for this report was under the direction of Rebecca E. Dove. Preparation of copy for publication was supervised in the Governments Division by Evadean Lint. Publication typing was performed mainly by the Administrative Service Division of the Bureau.

The cooperation and assistance of the many thousands of local officials who provided data for this phase of the 1957 Census of Governments is gratefully acknowledged.

August 1959

iv

In 1957, there were 174 standard metropolitan areas in continental United States.<sup>1</sup> About three-fifths of the entire population of continental United States resides within these areas, which were served in 1957 by 15,658 local governments, distributed by type as follows:<sup>2</sup>

School districts.....	6,473
Other, total.....	9,185
Counties .....	266
Municipalities .....	3,422
Townships.....	2,317
Special districts.....	3,180

Although these units represent less than one-sixth of all the local governments in the United States, they have twice as much revenue and expenditure, and about three times as much indebtedness, as all the other 86,621 local governments in the Nation. This is evident from the following figures on local government finances for the fiscal year 1957 (in millions):

Item	All local govern- ments	In standard metro- politan areas	Outside standard metro- politan areas
Revenue .....	\$28,896	\$19,274	\$ 9,622
Expenditure .....	31,232	20,822	10,410
Indebtedness .....	39,301	29,243	10,058

#### LOCAL GOVERNMENT FINANCES IN RELATION TO POPULATION

In 1950, according to the population census of that year, the 174 standard metropolitan areas that are reported here had 85.5 million inhabitants, or about 57 percent of the total population of continental United States. Most of the increase in the Nation's population that has occurred since 1950 has taken place in the metropolitan areas, principally in the suburban portions around the central cities. Even with allowance for this trend, the financial scale of local government is found to be somewhat greater in metropolitan areas, relative to population, than in the rest of the country.

<sup>1</sup>Since June 1959 these areas are known as "standard metropolitan statistical areas." The areas in this and other 1957 Census of Governments reports do not reflect changes in definition occurring since 1957. See also footnote 6, page 4.

<sup>2</sup>See Local Government in Standard Metropolitan Areas, (Vol. I, No. 2 of the 1957 Census of Governments).

<sup>3</sup>See U. S. Bureau of the Census, Current Population Reports, Population Characteristics, series P-20, No. 71. This report gives nationwide estimates of population as of March 1956, separately for the central cities, other parts of metropolitan areas, and the remainder of continental United States. For the present report, the relation between local government finances and population has been calculated in terms of the estimated population as of July 1, 1957, for consistency with ratios that appear in other publications from the 1957 Census of Governments.

In the Nation as a whole, local government revenue averaged \$170 per capita in 1957. For the 174 metropolitan areas presented here, the related figure was approximately \$191 per capita, while the average for all other local governments was about \$139 per capita. Local government expenditure in these metropolitan areas was approximately \$206 per capita in 1957, as against \$150 in the rest of the country and a composite nationwide average of \$183 per capita. For general expenditure alone--excluding utility and insurance trust amounts--the metropolitan area average of \$177 per capita compares with \$134 for local governments outside these areas and an overall figure of \$160. An even greater contrast is evident for indebtedness, averaging about \$289 per capita for local governments in the 174 metropolitan areas and \$145 per capita for other local governments, or \$231 in the Nation as a whole.

These data parallel findings on employment and payrolls of local governments for the month of April 1957 that were presented in Local Government Employment in Standard Metropolitan Areas (Vol. II, No. 3 of the 1957 Census of Governments). As indicated in that report, local governments in metropolitan areas not only tend to pay higher salaries but also average more employees, relative to population, than local governments outside metropolitan areas.

Table 1 presents local government data for metropolitan areas in relation to nationwide aggregates of local government finances. The population figures included in that table (and also in subsequent more detailed tables) are based on the 1950 Census of Population, and therefore do not reflect the subsequent changes which not only increased the United States population total to approximately 170 million in 1957, but raised the proportion for the 174 standard metropolitan areas that are reported here from a little below 57 percent in 1950 to approximately 60 percent in 1957.

Comparison of this figure with the percentages shown for various financial items in table 1 discloses areas of similarity and difference as between local governments within standard metropolitan areas and those elsewhere. For example, the metropolitan area fraction is considerably above 60 percent for every major category of revenue, with but one exception--intergovernmental revenue from State governments, which shows 55.3 percent for local governments in these areas, and 44.7 percent for those outside metropolitan areas. At the other extreme, as would be expected, the bulk of all local revenue from nonproperty taxes (84.3 percent) is accounted for by governments in the metropolitan areas.

The percentages shown for most categories of general expenditure similarly show a tendency toward greater-than-average spending by local governments in metropolitan areas. Exceptions appear for two categories on which metropolitan-area local governments accounted for only about one-half of all local government expenditure in 1957, or somewhat less than their share of the population--namely, highways

## INTRODUCTION

(a category which comprises city streets as well as other roads, highways, and bridges) and natural resources.

By far the largest functional category of local spending is education, which accounted for more than four-tenths of all general expenditure of local governments in 1957. The distribution of education expenditure was very similar to the distribution of population, with metropolitan-area units making up 60.8 percent of the local spending total. In relation to public school enrollment, however, education expenditure was materially higher in metropolitan areas than elsewhere, as the following figures show:

Areas	Local government expenditure for education, 1957, per pupil enrolled in public schools		
	Total	Capital outlay	Other
United States....	\$371	\$ 85	\$286
In 174 metropolitan areas.....	433	107	326
Central portions....	406	92	314
Outlying portions ...	529	161	368
Outside metropolitan areas.....	304	61	243

For each of the other functional categories of general expenditure, the proportion of all local public spending accounted for by units in the 174 metropolitan areas was greater than their fraction of the population, as indicated by the following figures:

Function	Metropolitan-area share of all local government expenditure in 1957 (percent)
Parks and recreation.....	84.2
Sanitation other than sewers*	83.6
Fire protection.....	80.7
Police.....	79.2
Sewers and sewage disposal.....	78.4
Health.....	76.5
Interest on general debt .....	74.8
Public welfare.....	68.7
Hospitals.....	65.6
General control.....	63.7

\*Street cleaning and refuse collection and disposal.

Table 1 distributes metropolitan-area amounts between the central and outlying portions of these areas. However, it is not possible to relate these figures to a corresponding distribution of population for any period since 1950.

## SIZE GROUPS OF METROPOLITAN AREAS

Financial amounts for local governments in standard metropolitan areas are summarized in table 2 according to groupings based on the 1950 population of each of the 174 areas, with a further distinction between the central and outlying portions of metropolitan areas. This table is based on table 3, which gives data for individual metropolitan areas and their component areas.<sup>4</sup>

<sup>4</sup>The 174 areas are listed in table 3 by States, according to the location of the central city of the area. In a number of instances, the metropolitan area extends across a State line, so that in order to obtain information on all metropolitan area counties (or other component areas) that are located within a particular State, it may be necessary to look also under the listing for an adjoining State.

Governments in the 14 largest metropolitan areas accounted for well over half of all local government expenditure in metropolitan areas in 1957, and for nearly four-tenths of the nationwide total of local government spending. Even higher proportions of local public debt were reported for the governments in these few largest metropolitan areas. The following figures show the percentages of national totals of local government expenditure and debt found for governments in various size groups of metropolitan areas:

Population of SMA (1950)	Expenditure	Indebtedness
All 174 SMA's.....	66.7%	74.4%
1,000,000 or more:		
With central city of over 1,000,000.....	27.6	32.9
Other.....	11.4	11.7
500,000 to 999,999.....	8.9	10.8
250,000 to 499,999.....	10.3	10.3
100,000 to 249,999.....	7.4	7.7
50,000 to 99,999.....	0.9	1.0

## CENTRAL PORTIONS OF STANDARD METROPOLITAN AREAS

For each metropolitan area, the central portion consists of the county or equivalent area that includes the central city or cities of the area--i.e., the city or cities named in the title of the area. For the New York-Northeastern New Jersey Standard Metropolitan Area, the central portions consist of New York City and Essex and Hudson Counties in New Jersey, which contain the cities of Newark and Jersey City. In New England, and in a few other instances where geographical components are not entire counties, the central portion of the area consists of the central city or cities. The outlying portions of each area constitute all geographical components not identified as central portions.

Of the 174 standard metropolitan areas, 111 consist of only a single county. Each of these metropolitan areas, of course, in terms of the concept described above, consists only of a "central portion" and has no "outlying portions." On the other hand, some individual metropolitan areas embrace numerous component areas, of which only one (or in a few instances, two or three) includes or consists of a primary city of the metropolitan area and is classed here, accordingly, as a "central portion" of the area.

Of the 15,658 local governments in standard metropolitan areas, 9,706 are located in central portions and the other 5,952 are in outlying portions of the areas. The units in the central portions are distributed by type as follows:

School districts.....	4,166
Other, total.....	5,540
Counties.....	156
Municipalities.....	2,076
Townships.....	1,313
Special districts.....	1,995

About 55 percent of all local government revenue and expenditure, and more than 60 percent of all local government debt in the United States is accounted for by these 9,706 governmental units in the central portions of standard metropolitan areas.

These amounts for the core areas represent slightly more than four-fifths of the aggregates for metropolitan areas as a whole, including their outlying portions. As might be expected, the fraction is much higher than this for the smaller metropolitan areas; for those of less than 500,000 inhabitants, more than 90 percent of the metropolitan area total is accounted for by the central portions.

## INTRODUCTION

Table 4 presents financial data for the individual central portions of all 174 standard metropolitan areas, with a breakdown by type of government and figures separately for the central city government and for any school and special districts overlying the central city.

Most central portions of metropolitan areas consist of an entire county of which the central city comprises only a part, so that amounts are reported in table 4 for an overlying county government. There are some exceptions, however, involving--

Areas in New England, where standard metropolitan areas are made up of municipal and town areas, so that each central portion shown here (except for Suffolk County, centering in Boston) comprises only a primary city of the metropolitan area;<sup>5</sup> and

Other metropolitan cities operating as city-county governments--namely, Baltimore, Boston, Denver, Baton Rouge, New Orleans, New York, Philadelphia, St. Louis, San Francisco, Washington, D.C., and several major "independent cities" in Virginia.

For these particular central portions of standard metropolitan areas, accordingly, no separate county government amounts are shown in table 4.

In numerous instances, the "overlying" units for which figures appear in table 4 are geographically co-terminal, or practically so, with the central city; for example, this is commonly the case for school districts

<sup>5</sup>Except in Rhode Island, these central metropolitan cities in New England are within areas served by county governments in 1957, so that complete exclusion of county amounts causes some understatement of local government finances for these areas. However, since county governments in New England have relatively very limited responsibilities, the understatement is very minor.

Table A.--PERCENT DISTRIBUTION OF LOCAL GOVERNMENT GENERAL EXPENDITURE IN STANDARD METROPOLITAN AREAS, BY FUNCTION, BY POPULATION SIZE OF AREA: 1957

Function	All 174 standard metropolitan areas	Area of 1,000,000 or more inhabitants in 1950		500,000 to 999,999 inhabitants in 1950	250,000 to 499,999 inhabitants in 1950	100,000 to 249,999 inhabitants in 1950	50,000 to 99,999 inhabitants in 1950
		With a central city of 1,000,000 or more	Other				
Total.....	100.0	100.0	100.0	100.0	100.0	100.0	100.0
Education.....	39.6	36.3	37.4	40.8	45.4	44.8	45.6
Capital outlay.....	9.8	9.8	8.5	9.8	10.6	10.7	10.1
Other.....	29.8	26.6	28.9	31.0	34.8	34.2	35.5
Highways.....	9.0	8.4	8.5	10.3	8.9	10.0	11.8
Capital outlay.....	4.5	4.5	4.1	5.8	3.4	4.7	5.1
Other.....	4.5	3.9	4.4	4.5	5.4	5.4	6.7
Police.....	5.7	6.5	6.0	5.3	4.7	4.6	4.3

Capital outlay.....	2.8	2.1	3.4	4.0	2.9	3.1	3.4
Other.....	1.1	1.1	1.1	1.3	1.1	1.1	1.2
Public welfare.....	6.6	7.1	8.0	5.1	6.0	4.9	6.5
General control.....	4.2	4.2	4.2	4.2	4.5	4.1	4.5
Hospitals.....	4.9	5.6	5.4	4.1	4.1	4.2	3.3
Fire protection.....	3.6	3.4	4.2	3.8	3.6	3.7	4.0
Interest on general debt.....	3.2	3.5	2.9	3.4	2.6	3.0	2.3
Parks and recreation.....	2.9	3.1	3.0	2.8	2.5	2.4	2.5
Sanitation, other than sewers <sup>1</sup> .....	2.5	3.0	2.2	2.3	2.2	2.0	1.8
Health.....	1.3	1.3	1.6	1.1	1.3	1.1	1.0
Other general expenditure.....	12.5	14.5	12.0	11.5	10.4	10.8	7.5

<sup>1</sup>Street cleaning and refuse collection and disposal.

<sup>2</sup>Includes amounts for housing and community redevelopment, libraries, correction, air and water transportation, and natural resources, as well as miscellaneous or unallocable general expenditure.

and housing authorities. However, some individual overlying units serve the entire county or some other territory that is greater or less than that of the central city. The presentation of data for overlying units in table 4, nonetheless, covers the finances of each such government in its entirety and without attempted proration.

## GENERAL EXPENDITURE BY FUNCTION

Text table A, below, gives a percentage distribution of the general expenditure of local governments in various size groups of metropolitan areas. While these figures may aid in the comparison of data for individual areas that appear in tables 3 and 4, other factors may considerably affect individual-area amounts--for example, the extent to which certain functions or services are provided directly by the State government rather than by local governments. Interstate variations on this score are especially to be noted for public welfare, and in some instances, for highways and for health and hospitals. On a State-by-State basis (though not explicitly for local areas), some background concerning such variations in the relative role of State and local governments is available from other publications of the 1957 Census of Governments including the *Summary of Public Employment* (Vol. II, No. 1), and the *Compendium of Government Finances* (Vol. III, No. 5).

In table A, the various functions are listed in descending size order, in terms of expenditure amount. It is evident that education and highways represent a greater portion of all local general expenditure in large than in smaller metropolitan areas, while the converse is true for such functions as police, hospitals, interest, and parks and recreation, with various other functional classes averaging relatively similar--as a percentage of all spending--for most of the size groups.

## INTRODUCTION

### CONCEPTS AND DEFINITIONS

#### Definition of standard metropolitan areas<sup>6</sup>

Except in New England, a standard metropolitan area is a county or group of contiguous counties which contains at least one city of 50,000 inhabitants or more. In addition to the county or counties containing such a city or cities, contiguous counties are included in a standard metropolitan area if, according to certain criteria, they are essentially metropolitan in character and socially and economically integrated with the central city.

The criteria of metropolitan character relate primarily to the character of the county as a place of work or as a home for concentrations of nonagricultural workers and their dependents. Specifically, these criteria are:

1. The county must (a) contain 10,000 nonagricultural workers or, (b) contain 10 percent of the nonagricultural workers working in the standard metropolitan area or, (c) have at least one-half of its population residing in minor civil divisions with a population density of 150 or more per square mile and contiguous to the central city.

2. Nonagricultural workers must constitute at least two-thirds of the total number of employed persons of the county.

The criteria of integration relate primarily to the extent of economic and social communication between the outlying counties and the central county as indicated by such items as the following:

1. Fifteen percent or more of the workers residing in the contiguous county work in the county containing the largest city in the standard metropolitan area, or

2. Twenty-five percent or more of the persons working in the contiguous county reside in the county containing the largest city in the standard metropolitan area, or

3. The number of telephone calls per month to the county containing the largest city of the standard metropolitan area from the contiguous county is four or more times the number of subscribers in the contiguous county.

In New England, the city and town are administratively more important than the county, and data are compiled locally for such minor civil divisions. Here towns and cities were the units used in defining standard metropolitan areas, and most of the criteria relating

<sup>6</sup>This definition is quoted in its entirety from U.S. Bureau of the Census, U.S. Census of Population: 1950, Vol. I, Number of Inhabitants, p. xxxiii. For the 1950 Census of Population, 168 areas were designated as standard metropolitan areas. The present report takes account also of subsequent additional designations, as promulgated by the U.S. Bureau of the Budget up to the end of 1957. These later actions have (1) recognized 6 new standard metropolitan areas, as follows—Dubuque (Iowa), Fort Smith (Ark.), Hampton-Newport News-Warwick (Va.), Santa Barbara (Calif.), Tucson (Ariz.), and West Palm Beach (Fla.); and (2) added territory to certain previously designated areas, as follows—Atlanta (Ga.), adding Clayton County; Evansville (Ind.), adding Henderson County (Ky.); Milwaukee (Wis.), adding Waukesha County; and Shreveport (La.), adding Bossier Parish.

to the number and proportion of nonagricultural workers set forth above could not be applied. In their place, a population-density criterion of 150 persons or more per square mile, or 100 persons or more per square mile where strong integration was evident, has been used.

#### Central and Outlying Portions of Standard Metropolitan Areas

The nature of this geographical subclassification has been described above under "Size Groups of Metropolitan Areas."

#### Types of Governments

The count of governmental units included in tables 1 to 3 and the classification of financial data by type of government in table 4 are based upon the enumeration of governments described in Governments in the United States (Vol. I, No. 1 of the 1957 Census of Governments).

As more fully described there, a government is an organized entity having governmental attributes and substantial autonomy. Under this definition, most local school systems are recognized and counted as separate governmental units—i.e., as school districts—but some are classified as agencies of other governments. Similarly, while numerous local districts and authorities constitute special district governments, some entities so named are adjuncts of county, municipal, or township governments. The report entitled Local Government Structure (Vol. I, No. 3 of the 1957 Census of Governments) lists in detail, for each State, types of authorized special districts and various kinds of "dependent" agencies.

#### Financial Statistics

The government finance data reported here relate to fiscal years of local governments which ended during calendar 1957. For school districts, this means mainly the 12 months ending June 30th. Fiscal years range widely for other types of governments, with December 31 the most frequent ending date.

In the assembly and reporting of financial data for individual governments, "revenue" and "expenditure," respectively, comprise all amounts of money received and paid out by a government and its agencies (net of correcting transactions such as recoveries or refunds), with the exception of amounts for debt issuance and retirement and for loan and investment, agency, and private trust transactions. Since this report deals with local government aggregates, interlocal transactions are netted out.

Payments among the various funds and agencies of a particular government are excluded from revenue and expenditure, as representing internal transfers. Thus, a government's contribution to a retirement fund it administers is not counted as expenditure, nor is the receipt of this contribution by the retirement fund considered revenue.

It will be evident from the foregoing that governmental expenditure includes all capital outlay, of which a major portion is commonly financed by borrowing, while governmental revenue does not include receipts from borrowing. Thus, the relationship between totals of revenue and expenditure, as shown in this report, should not be considered a direct measure of the degree of budgetary "balance," as that term is commonly applied to particular governments.

"General revenue" comprises all revenue other than that from utility, liquor store, or insurance trust sources. "Utility revenue" consists of the sales receipts of water supply, electric power, gas supply,

and transit systems owned and operated by local governments, and "liquor stores revenue" represents sales receipts of such stores, as operated by local governments in a few States. "Insurance trust revenue" appears in this report only for employee-retirement systems administered by local governments, and consists of the amounts received by such systems in the form of employee contributions and earnings on investments. Contributions by the administering governments, as noted above, represent internal transactions rather than governmental revenue or expenditure.

"Intergovernmental revenue" comprises money amounts received from other governments; it does not include, however, any grants or aid in kind, such as surplus foods received for school lunch programs. To avoid duplication, interlocal transactions are excluded here, and only amounts from the Federal Government and State governments are shown as intergovernmental revenue.

"Charges and miscellaneous general revenue" comprises all general revenue other than from taxes and other governments. It mainly consists of charges for services and commodity sales (other than by the four types of local utilities mentioned above, and by local liquor stores), but includes also any amounts from special assessments, earnings on investments (other than those of retirement systems), sale of property, and miscellaneous sources including fines, forfeits, donations, and the like.

"General expenditure" consists of all expenditure other than that for utility, liquor store, or insurance trust purposes. "Utility expenditure" comprises payments for the provision and operation of the four types of utilities mentioned above, including amounts not only for current operation and capital outlay, but also for interest on any debt incurred for these utility purposes.

"Liquor stores expenditure" consists of payments for provision and operation of liquor stores. "Insurance trust expenditure," which in this report is limited to locally administered employee retirement systems, comprises payments of benefits and refunds by such systems. Any contributions by local governments, as employers, to State-administered retirement systems covering their employers, or to the Federal system of Old Age and Survivors Insurance, are included without distinction in other categories of expenditure.

"Capital outlay," as shown separately in total and for certain functions, consists of expenditure for new construction and for purchases of equipment (including replacements as well as additions) and of land and existing structures.

"Debt outstanding" is reported as of the end of local governments' 1957 fiscal years, and includes all long-term credit obligations of local governments and their agencies, and all interest-bearing short-term credit obligations. "Nonguaranteed long-term debt" consists of amounts payable solely from earnings of revenue producing activities, from special assessments, or from specific nonproperty taxes.

"Cash and security holdings" is shown as a summary total, covering all financial assets of local governments and their agencies (except holdings of agency and private trust funds) as of the end of the 1957 fiscal year. The total includes retirement system holdings, as well as other financial assets of local governments.

The nature of most of the functional categories for which amounts of general expenditure are separately reported will be evident from their designations. Following, however, is additional information about a number of these categories.

## INTRODUCTION

"Education" mainly pertains to local public elementary and high schools, but covers also any local government provision for college-level education. This category includes gross expenditure for the school lunch program and other cafeteria operations, as well as school health, recreation, and library services administered by local schools.

"Highways" includes not only regular highways, roads, sidewalks and streets, but also gross expenditure amounts for any locally operated toll highway facilities—roads, tunnels, bridges, or ferries. However, expenditure for highway policing and street cleaning falls under other headings.

"Public welfare" consists mainly of expenditure for public assistance, including general relief and programs of State-and Federally aided categorical public assistance, wherever these are administered by local governments. In numerous States, some or all public assistance programs are administered directly by the State government, rather than through local governments, so that marked variation appears in the local expenditure amounts for this function that are shown for various metropolitan areas.

"Natural resources" comprises local government facilities and services with regard to agriculture, drainage, irrigation, forestry, and related conservation activities.

"Other sanitation" pertains to street cleaning and the collection and disposal of refuse and garbage.

"General control" comprises the legislative, judicial, and central executive and administrative agencies of local governments, including tax assessment and collection and general financial administration.

"Interest on general debt" consists of all interest expenditure, other than for interest on utility debt, which is treated as part of utility expenditure. Accordingly, expenditure reported for other general government functions, such as education, highways, and sewers, does not include any amounts of interest paid on debt incurred for those functions.

"Other general expenditure," as shown in tables 1 to 4, includes amounts for a considerable range of local government services and activities, including housing and community redevelopment, airports, water transportation and terminals, correction, libraries, and general public buildings. Expenditure amounts for these functions are summarized nationally and by States in the Compendium of Government Finances (Vol. III, No. 5 of the 1957 Census of Governments).

#### DATA SOURCES AND PRESENTATION

This report provides a special grouping and presentation, for standard metropolitan areas, of data concerning local government finances that have been presented on a nationwide basis and by States in other publications of the 1957 Census of Governments.

These financial statistics are based for the most part on a mail canvass. However, for municipalities of over 250,000 population and for some other local governments, Census Bureau representatives compiled basic information from official local reports and records. A number of different questionnaires, tailored to the kinds and size of the governments involved, were used for the mail survey of local government finances. Supplementary instructions concerning unusual types of transactions also accompanied the forms sent to particular types of units in individual States.

# INTRODUCTION

The reports received were carefully examined for completeness, internal consistency, and compliance with reporting instructions. Followup correspondence was used to obtain additional information and to confirm or correct seemingly inconsistent figures. Census enumerators visited major nonrespondent governments, to compile figures needed for them and, in some cases, to obtain additional or corrective information from governments that had furnished inadequate reports by mail. For a minor number of relatively small local governments, it was necessary to estimate amounts by reference to figures reported by other similar units.

The figures thus assembled were grouped and summed to arrive at the financial statistics presented in this report.

The statistics reported as to numbers of local governments and public school enrollment are from Governments in the United States (Vol. I, No. 1, of the 1957 Census of Governments), which includes a detailed description of the methods used in gathering these data.

The symbol "...," as found in various tables, may generally be interpreted as signifying either a zero amount or inapplicability of the item called for. However, it is possible that this entry also appears in some instances where more detailed or intensive methods of data collection might have uncovered minor amounts for reporting. Because of rounding, detailed amounts appearing in the various tables will not always add to the totals shown.

# SUMMARY

**Table 1.—LOCAL GOVERNMENT FINANCES IN THE UNITED STATES AND IN STANDARD METROPOLITAN AREAS: 1957**  
(Dollar amounts in millions)

Item	All local govern- ments	Amounts			Outside standard metropol- itan areas	Percent			Outside standard metropol- itan areas

\*Items less than \$1,000.

\*\*Includes \$138,198 thousand, paid by the city of Long Beach to the State of California, in settlement of litigation involving oil lands.

†Local government amounts for North Carolina do not reflect basic costs for the 9-month term of local schools, provided for directly by State government expenditure.
